Profile

Data Engineer with seven years of experience, including three years in a managerial position and team leadership. Extensive experience in designing and maintaining various ETL pipelines, optimizing data extraction processes, working with Data Quality, and handling large-scale data. Successfully deployed Data Science projects, including ML and LLM models, into production and ensured their ability to process large volumes of data on a daily basis. Expertise in distributed data storage systems and ensuring high code quality. Strong experience in establishing and structuring team workflows. Proven ability to communicate with customers, gather business requirements, and defend technical decisions in front of stakeholders. Experienced in working within multicultural and cross-functional teams.

Work Experience

Team Lead — Semrush (06/2022 – Present)

- Led a team of 9 engineers in building a reliable and efficient data source for product teams, enabling them to develop their products based on high-quality data.
- Collaborated with a large team of data scientists to review, develop, and deploy their research into production, ensuring its scalability and applicability to large datasets within a reasonable timeframe.
- Increased data delivery frequency to production from once a month to daily.
- Implemented and automated data quality checks, regular exports, and feature validation.
- Refactored legacy solutions, ensuring seamless integration of new features and reducing their implementation time from two years to one quarter.
- Optimized team workflows and processes
- Actively participated in hiring, onboarding, and knowledge-sharing activities.

Key Achievements: Rebuilt a completely disbanded team from scratch. Overhauled all legacy systems, improving data delivery processes, reducing errors and delays, and increasing calculation speed by 4x. Reduced infrastructure costs by 50%.

Data Engineer — Innotech (12/2021 – 06/2022)

- Developed ETL processes to automate Asset-Liability Management (ALM) in VTB Treasury.

- Contributed to the development of a cash flow calculator for the bank's risk management team, similar to the Kamakura system.
- Implemented code quality control tools, including Pylint, Bandit, and SonarQube.

Key Achievements: Created utility tools that reduced development time, code complexity, and the number of post-production bugs by 50% when adding ETL pipelines for new data sources. Enforced code quality standards across all projects using SonarQube, linters, and formatters.

Data Engineer — MTS, Moscow (06/2019 – 12/2021)

- Maintained daily data exports and processing, optimizing large-scale data workflows with Apache Airflow.
- Developed a custom ETL engine on Spark, enabling seamless data transfers between sources with built-in transformations and processing. The engine supported a wide range of data sources, including file storage, relational databases (Oracle, PostgreSQL, MySQL, Teradata, ClickHouse), Hadoop (HDFS, Hive), FTP, and SFTP. It also provided the capability to wrap a pipeline into an Airflow DAG and deploy it to production immediately.
- Integrated data lineage tracking across all pipelines to enhance process visibility.
- Enforced code quality standards across all projects using SonarQube, linters, and formatters.

Key Achievements: Accelerated the development, testing, and production deployment of data pipelines for internal product teams by 40% through the creation of the custom ETL engine on Spark.

Skills & Technologies

Programming Languages: Python, SQL

Data Processing: Pandas, NumPy, Scikit-Learn, SciPy

Distributed Systems: Hadoop, PySpark, ClickHouse

Databases: PostgreSQL, MySQL

Orchestration Tools: Apache Airflow, Luigi

Cloud & DevOps: Google Cloud Platform (GCP), AWS, Linux, Docker, Prometheus, Grafana, Ansible, Terraform, Kubernetes

Skills: Architecture Design, Team Management, Distributed Systems, Database Optimization, Big Data, Data Engineering Solutions (DES), Data science, ML, LLM

Education

National Research Nuclear University "MEPHI," Moscow (2013 – 2019)

Faculty of Cybernetics and Information Security, Cryptology, and Cybersecurity.

Languages

Russian – Native, English – Professional Working Proficiency, Japanese – Beginner
